Mahbub Haq Al Farisi

Software Engineer

Jakarta Metropolitan Area

Summary

Currently, I work as a Software Engineer at PT Primavista Solusi especially in frontend web development using Next JS and Laravel framework. I was also involved in fullstack web development using Laravel and .NET Core.

Since college, I've been interested in digital payment systems and how IT can boost a country's economy. Apart from that, I also developed a website locally for recording my own personal finances which I am currently using and am still developing further. I usually spend my free time developing my own personal finance website I mentioned earlier, trying programming tutorial or someone else's interesting code snippets, dancing, and reading articles about technology, space, stock market, automotive, and art.

Experience

PT Primavista Solusi

Software Engineer

April 2019 - Present (5 years 1 month)

Greater Jakarta Area, Indonesia
